

Revised Technical Partnership Framework

Prepared by: Dozer | To: Egegieh Onyekachi Daniel, Founder & CEO

01 Purpose

Thank you for the equity proposal - good starting point. I want to stay long-term on DOVA: go-live, soft launch, and technical leadership. This suggests adjustments so title, equity, and responsibilities match the work done and ahead. Nothing here is final or binding - the goal is terms we both feel good about before legal docs.

02 Aligning the role title with the work

Your proposal: Backend Developer, 3%. Suggested: CTO & Founding Engineer - because scope spans backend, infra, launch, and technical leadership.

Area	Backend hire	DOVA needs now
API / architecture	Build to spec	Own full backend design
Infra & live site	Often separate	Live at dova.dntech.id
Go-live	Handover	Paystack live, soft launch
Post-funding	IC role	Help hire + lead engineering

2.2 Infra until meaningful investor funding (same as now)

Item	Cost to DOVA	Contribution
VPS + live site	Rp0 N0	Hosted and maintained until meaningful funding
Public URL dova.dntech.id	FREE	Already live - this is the domain I support
SSL, DB, monitoring	FREE	Configured, same as now
Custom domain (e.g. dovachain.com)	Not covered	DOVA buys/owns later if it wants one

I am ready to keep supporting infra the same way as now until meaningful investor funding lands. Public site stays on dova.dntech.id - I am not covering a custom domain. Reference if paid directly: ~Rp109k/mo. 30-day handover after a meaningful round.

03 One-screen summary

Your current proposal

Role	Backend Developer
Equity	3%
Vesting	4 years / 1-year cliff
Compensation	N0 pre-funding
Scope	Backend development

Suggested framework for discussion

Role	CTO & Founding Engineer
Equity	~7% fully diluted (range 6.5-7.5%)
Vesting	4 years / 6-month cliff
MVP recognition	1.5% on signing (work already delivered)
Compensation	N0 pre-funding
Scope	Technical ownership + infra until meaningful funding

04 Role & responsibilities

- Technical roadmap, backend, Paystack, go-live, security, infra on dova.dntech.id
- Work with FE + QA; help grow engineering after funding
- CTO = ownership of technical function, not unilateral company control
- Major decisions in alignment with founder and agreed priorities

05 Equity - ~7% opening discussion term

Component	Amount	Notes
MVP recognition	1.5%	On signing - past delivery (Appendix A)
Future vesting	5.5%	4-year vest, 6-month cliff, then monthly
TOTAL	~7%	Fully diluted (range 6.5-7.5%)

MVP recognition is part of the total, not stacked on top: 1.5% acknowledges work already delivered before this arrangement; 5.5% vests against continued contribution going forward.

If scope expands materially, equity can be revisited by mutual agreement. ~7% (range 6.5-7.5%) is my reasonable starting point for the scope described here.

06 Cash compensation

Phase	Terms
Before funding	NO salary - acceptable given equity + infra contribution
After meaningful funding	CTO compensation agreed based on funding, runway, and needs

Targets for conversation, not hard demands. Salary specifics better on a call once funding is clear.

07 IP, infra, commitments

- Until a signed final agreement: no IP assignment. DOVA may use the stack to operate the product; use/branding does not transfer ownership.
- Existing infra, code, repo, configs, and dova.dntech.id remain under my ownership and control until the agreement provides otherwise (Schedule A).
- Infra: same as now until meaningful investor funding; public URL = dova.dntech.id (no custom domain)
- After meaningful funding AND signed terms: 30-day handover to company-owned accounts
- From me: launch in good faith, stable live site, collaborate openly
- From DOVA: unblock Paystack KYC + suppliers; share cap table before final docs

08 Next step

If this direction feels reasonable, let's talk on a call and paper agreed points properly. No signature required. Discussion draft only - not binding.

DOZER

FOUNDER - DOVA

Name: Dozer

Name: Egegieh Onyekachi Daniel

Appendix A MVP already delivered

Deliverable	Status
NestJS API (full flow)	Done
PostgreSQL + Paystack + webhooks	Done
Live site (dova.dntech.id)	Live
92 tests + CI	Green
Runbooks + env docs	Done

Ahead: Paystack live, prod hardening, supplier pilot, monitoring.
